LEONARDO OLIVIERI SZERVINSKI

Junior Full Stack Developer

Brasília, DF – Brazil | leonardo.szervinski@hotmail.com

Portfolio: leonardosz.com | GitHub: github.com/LeonardoSzervinski | LinkedIn: linkedin.com/in/leonardo-szervinski-84a760243

PROFESSIONAL SUMMARY

B.Sc. in Software Engineering from the Catholic University of Brasília (UCB), working across the full stack: back-end development, REST API integration, relational databases and web interfaces. Hands-on project experience with OAuth2 authentication, integration with Banco do Brasil's Billing API, Oracle development with PL/SQL, generative AI applications and automated testing with continuous integration. Seeking a junior full stack developer position to help build reliable, well-tested and maintainable systems.

TECHNICAL SKILLS

Programming languages: Java, Python, TypeScript, JavaScript, PHP, SQL, PL/SQL, C
Back-end & APIs: REST APIs, OAuth2, Node.js, Next.js, Flask, LLM API integration (OpenAI, Ollama)
Front-end: HTML, CSS, JavaScript, TypeScript, React (Next.js), accessibility
Databases: Oracle (SQL, PL/SQL, APEX), PostgreSQL, SQLite, SQLAlchemy
Cloud & DevOps: AWS, Docker, CI/CD with GitHub Actions, Linux, Vercel
Testing & quality: PHPUnit, Cypress, BDD (Gherkin), unit testing
Software engineering: Object-oriented programming, SOLID, Clean Code, Design Patterns, Git, Scrum, Kanban
Languages: Portuguese (native); English (intermediate, technical reading and writing)

PROJECTS

Banco do Brasil Billing API Integration Technical assessment · 2026

PHP 8, OAuth2, REST API, SQLite, PHPUnit

- Integration with Banco do Brasil's Billing API v2 in the sandbox environment: registration, retrieval, filtered listing and write-off of bank slips (boletos).
- OAuth2 authentication (client credentials) with the access token cached and reused while valid, reducing authentication calls.
- Error handling that distinguishes API rejections from temporary communication failures, covered by automated PHPUnit tests.

PDF Insight AI 2026

Next.js, TypeScript, Node.js, LLM APIs, Vercel · github.com/LeonardoSzervinski/pdf-insight-ai

- Web application that extracts text from PDF files on the server and generates a summary, key points and insights through a language model.
- AI provider configurable through environment variables (local Ollama or OpenAI-compatible API), with a fallback model in case of failure.
- Chunking of long documents to avoid timeouts and context overflow; application deployed to production on Vercel.

Interactive Portfolio 2026

JavaScript (ES Modules), HTML, CSS, GitHub Actions · leonardosz.com

- Dependency-free front-end structured around SOLID and design patterns (Observer, Strategy, Factory).
- Unit tests run in a continuous integration pipeline (GitHub Actions) on every push; bilingual, accessible site.

Product Catalog in Oracle APEX 2025

Oracle APEX, SQL, PL/SQL · github.com/LeonardoSzervinski/oracle-apex-cadastro-produtos

- Product and category management, with a price validation rule enforced in the database by a PL/SQL trigger.

End-to-End Test Automation 2025

Cypress, Gherkin (BDD), JavaScript · github.com/LeonardoSzervinski/projeto-cypress

- Login, catalog, cart and checkout scenarios of an e-commerce site in Gherkin, automated with Cypress.

EDUCATION

B.Sc. in Software Engineering Completed in 2026
Catholic University of Brasília (UCB)

CS50: Introduction to Computer Science Online course
Harvard University (HarvardX)
